

AppeTITE

The appetite stimulant!

AppeTITE stimulates hunger and encourages eating when horses are off their feed.

The Benefits

- ✓ Improves horses' eating habits
- ✓ Easy to use - no injections
- ✓ Highly palatable cherry flavour
- ✓ Effect is instant
- ✓ Can be used daily
- ✓ A healthy appetite can help reduce the risk of gastric ulcers

AppeTITE

The appetite stimulant!

INGREDIENTS

AppeTITE contains Vitamins B1, B2, B6 and B12.

HOW APPETITE WORKS

The concentrated dose of B Vitamins stimulates the hunger reflex in the horse making him want to eat and look for food.

AppeTITE is a highly palatable cherry flavoured liquid. It is slightly acidic; when it hits the tongue, this causes the horse to lick and produce saliva, stimulating him to eat.

AppeTITE is especially effective in performance horses or horses on a high grain diet, as they have increased risk of being deficient in B vitamins.

Maintaining appetite ensures that the horse has the energy required for competition and can maintain body condition during times of stress.

AVAILABLE SIZES

- > 946mL bottle with dose measure
- > 3.78L bottle

DIRECTIONS FOR USE

- > Dosage: 30mL.
- > Use the measurement on the 946ml container or use a syringe to draw up the required amount and squirt over the tongue.
- > Use **AppeTITE** as soon as the horse comes back from work or ideally 10 minutes before feeding. This should result in an empty feed bin!
